Air Canada adds Wide body aircraft between Vancouver and Toronto to keep up with Traveler demand and Cargo demand.

Air Canada Air Canada Rouge significantly increases capacity this winter between Vancouver and Toronto to the "Valley of the Sun" - **Phoenix Sky Harbor International Airport!** Their current winter-spring schedule now includes non-stop wide-body 767-200 aircraft between PHX and Vancouver (YVR) and 767-300 service to Toronto (YYZ).

The larger aircraft provides excellent connections for "snow birds" traveling or for the shipping community between Arizona and our global network.

Air Canada is working to secure more Global Cargo out of Arizona, especially when they operate their wide body aircraft. With the 737 MAX grounded, they have leased Omni 767-200 wide body aircraft to operate between PHX-YVR in Q1 2020. Today's flight out of Sky Harbor, besides carrying travelers, has cargo bound for Munich and Frankfurt on board! This will help facilitate exporting more of Arizona products globally.
